

REFRIGERATOR PAPER

Khan Academy Website

www.khanacademy.org

This is a wonderful resource with videos that explain mathematical concepts (some other subjects too) and give practice problems for students to practice skills and get immediate feedback. I can also monitor progress through my teacher account.

SpringBoard Math Online Book

<http://herschercommunityil.springboardonline.org>

Students can access their books online using the account we set up in class. I will be distributing pages from the book lesson by lesson throughout the year, so the online book may be useful to parents if you want to see the entire unit together.

Use Google Chrome or Safari as browsers.

DigitWhiz.com or Math Drills App (optional)

I highly recommend utilizing one of these resources if your child struggles with basic facts. If they are ready for a push they can begin exploring integer operations on digitwhiz. The ability to quickly know your basic facts/integer facts is imperative to their success in 7th/8th grade. If they are on it for even 5 minutes/day it will make a huge difference.

DigitWhiz- You can purchase a digit whiz membership for \$5/month. It is also available as an app for the Ipad. I have been looking for other apps, but have not found anything as good as DigitWhiz for integers. If I find something I will let you know!

Math Drills App- The app "Math Drills" is great for basic facts and we will use periodically on iPod's in my classroom.
